

## Security

At Eagle Bank we are concerned about the security of your personal information. Just like you, we want all your personal information kept that way - personal and private. If you check out our Privacy Policy, you'll see we do not give out information about you to a third party unless it is necessary to provide a service or product you requested. We never give your e-mail address to anyone. Your personal and account information is secure and private.

When you give us information about yourself over our Web site, we use it to verify who you are, to keep your account with us secure, and to complete your transaction requests. Your personal information is private and we respect your privacy.

To protect your personal information from exposure to unauthorized persons, we use industry-encryption methods to transmit your personal registration information from your computer to ours across the Internet, and we restrict access to any transactional portions of our Web site to computers running Web browsers that support Secure Socket Layer ("SSL") protocol. To use this protection technology, you need to have an SSL-capable browser, such as Microsoft Internet Explorer, Safari or FireFox. These browsers will automatically activate the technology when you log on to our Web site.

Our Web site was developed with a focus on security mechanisms designed to address information security issues. These mechanisms depend upon security firewalls and intrusion detection systems.

Firewalls provide the highest level of perimeter security, only allowing traffic that is recognizable as "safe". Unsafe traffic is dropped, logged, and the appropriate personnel are notified. An intrusion detection system provides sophisticated real-time detection mechanisms, by monitoring all inbound traffic. It instantly identifies, logs and alerts administrators to unauthorized use, misuse, and abuse of our systems by internal saboteurs and external hackers. When suspicious events are recognized, it is logged and the appropriate personnel are notified immediately.

Please remember that you play an important part in security as well. Your password to access Eagle Bank's online banking site, which you select at the time you complete your registration should never be shared with anyone. After you finish using Eagle Bank's online banking site, you should log off and exit your browser so no unauthorized persons can use Eagle Bank's online banking site with your name and account information. Also you should not store secured pages in your cache or leave your computer unattended while you are logged into Eagle Bank's online banking site.

Remember that any information you voluntarily disclose on-line in any news or message postings, discussion groups or chat rooms may be collected and used by others without your permission. Furthermore, if you provide any information to parties who operate Web sites that

are linked to or from our site, different rules may apply to their collection, use or disclosure of your personal information. We encourage you to review the privacy policies connected with these sites before revealing any sensitive or personal information.

Regardless of the precautions taken by you or us, "perfect security" does not exist on the Internet. We cannot (or anyone else currently) ensure or warrant the security of any information you transmit to us via the Internet.

Links in this website will allow you to leave the Eagle Bank website. Eagle Bank is not responsible for the contents of any linked websites and assumes no responsibility for such linked sites. The links are provided for your convenience only.

#### A few words about Cookies

In order to better serve you and protect your account information, we use "cookies". Cookies are packets of data that are stored on your hard drive as a file. We use cookies to verify who you are while using Internet banking. Cookies make it easier, quicker, and more secure for you to log into and use Internet banking.

Cookies do not compromise privacy. Their data is usually stored on your computer's hard drive as a file or folder called "cookies", and you can delete this file anytime if you choose. A new file will be created when you log into our site. Finally, cookies created by one site will only work with that specified site. Site "A", for example, cannot read cookies generated by Site "B" and then use that information for purposes for which it was not intended. Eagle Bank's express policy is to use cookies only for your account security while using Internet banking.
